

# Learning Activity: java.lang.Object

[Back](#)

## Educational Objectives

- Gain familiarity with java.lang.Object.

## Instructions

List the public and protected methods of java.lang.Object. For each method, give:

- Its name
- Its access level, including a comment when not public
- Its parameter list, including a short description of each parameter
- Its return type, including a short description its significance
- A brief description of what the method does. (2 - 3 sentences is sufficient.)

Yes, you can use the documentation for the source of this information. No, you don't have to rephrase the documentation, though it would be good to have a general idea of what the documentation is saying, rather than just cut-and-paste.

## Notes

- Please include the standard header in your file. (See [guidelines](#).)
- Clearly label the different pieces of information for each method.
- Use at least one blank line to separate the information for each method from that of other methods. For example, you could use one blank line to separate overloaded methods from each other and two blank lines to separate non-overloaded methods.

## Submission

One ASCII text file with the requested data about the methods.

## Evaluation Criterion

### Check

Correct information, formatted as outlined.

### Minus

Missing information or not clearly formatted.
